III. Comments – Inspection Narrative

- *Document the area of the permit inspected*
- *Discuss observations made during the inspection*
- *Document the results of any field tests taken*
- *Provide a summary of any discussions with industry representatives, along with results, and expectations from those discussions*
- *Describe any enforcement action taken during the inspection, along with facts or evidence supporting the enforcement action*

No exploration drilling is currently in progress at UEC Permit No. 123C. During this inspection, the 33100 area of exploration was inspected for site restoration issues. On 9-17-08, 32 exploration boreholes were inspected for compliance with the regulation and permit requirements on this property, also referred to as the Gram lease. At this time, muddy conditions prevented access to the lower portions of the 33100 area; however a selection of drilling locations were inspected on higher ground and no significant restoration issues were noted. The general appearance and typical examples of site restoration efforts in the 33100 area of operation are documented in Photos 1-5.

Incidents of mud pit subsidence noted in the P-107 Jacobs area in last month's inspection report have been repaired as seen in Photos 6-7. Site restoration follow up in other areas of UEC Permit No. 123C will be the subject of future inspections.

Project Name: Weesatche
Permit Number: 123C
Inspection Date: February 23, 2010
